

Zhen Ding Technology Holding Limited Conflict Minerals Report

For the year ended December 31, 2024

Zhen Ding and its consolidated subsidiaries' operations may involve the manufacturing or subcontracting of products that require the use of conflict minerals for their functionality or production, collectively referred to as the "Products." The Covered Minerals, such as gold, tin, tantalum, tungsten, cobalt, Mica, Li, Ni, Cu, Gr etc. are utilized to varying degrees in our diverse product lines.

This Conflict Minerals Report describes:

- (1) The good faith reasonable country of origin inquiry ("RCOI") concerning the conflict minerals included in the Products during the Reporting Period, aimed at determining whether any of these Covered Minerals originated in the Covered Countries.
- (2) The methods and framework utilized by us to exercise due diligence in tracing the source and custody chain of our Covered Minerals.
- (3) The assessment of the facilities involved in processing the Covered Minerals and their respective countries of origin.

Reasonable Country of Origin Inquiry (RCOI)

1. Conflict Minerals Commitment

Conflict minerals refer to minerals mined in areas of armed conflict or under conditions that violate human rights, specifically precious metal minerals mined by the Democratic Republic of the Congo and adjoining countries. Conflict minerals include gold (Au), tin (Sn), tantalum (Ta), tungsten (W), Cobalt (Co), Mica, Lithium (Li), Nickel (Ni), Copper (Cu), Graphite (Gr) etc. and are mainly used in electronic parts. In response to global control measures for conflict minerals, the Company has incorporated conflict minerals into its supplier management policies, and proposed policies, objectives and management practices to meet international trends and customer requirements.

Zhen Ding is committed to upholding humanitarian and ethical principles outlined in the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, including the associated supplements on gold, tin, tantalum, and tungsten etc. (the 'OECD Guidance'). These principles are integrated to augment our policies and procedures concerning conflict-free sourcing. We have embraced the due diligence framework prescribed by the OECD Guidance and structured our due diligence measures in alignment with its recommendations.

Furthermore, as a member of the Responsible Business Alliance (RBA), Zhen Ding has adopted the RBA Code of Conduct, which articulates the RBA's overarching principles for responsible mineral sourcing. These principles have been integrated into our Supplier Code of Conduct, which all our suppliers are required to adhere to.

2. Participation in Trade Association Conflict-Free Initiatives

In May 2021, Zhen Ding officially became a member of the Responsible Business Alliance (RBA) and pledged its support for industry-wide conflict-free initiatives such as the Global e-Sustainability Initiative (GeSI) and the Responsible Minerals Initiative (RMI)'s Responsible Minerals Assurance Process (RMAP).

Zhen Ding's procurement policy mandates that our suppliers complete and regularly update the RMI Conflict Minerals Reporting Template as an industry-standard method to gather sourcing information related to conflict minerals. Furthermore, RMAP utilizes independent third-party audits to certify the conflict-free status of participating smelters and refiners. Our policy requires our suppliers to source from smelters or refineries validated under the RMAP. In 2021, Zhen Ding joined RMI as a member to access updated information to facilitate the implementation of our conflict minerals compliance program.

3. RCOI Efforts

Zhen Ding does not directly procure the Covered Minerals from smelters, refiners, or mines. Instead, we rely on the smelter and refiner information provided by our first-tier suppliers who supply these Covered Minerals to us. This information helps us identify the smelters and refiners in our supply chain. Our suppliers are required to complete the Conflict Minerals Reporting Template (CMRT) & Extended Mineral Reporting Template (EMRT) developed by RMI, and we conduct investigations on special minerals requested by customers (such as Nickel, Zinc, Copper, Aluminum, Bismuth, Indium, Magnesium, Manganese, Molybdenum, Iron, Ruthenium, Silicon, Steel, Tellurium, Titanium, Rare Earth etc.) by using the AMRT (Additional Mineral Reporting Template). obtain representations from their own suppliers, adhere to our Supplier Management Program, and regularly update all information related to conflict minerals for the Reporting Period that they provide to us.

As part of our membership in the Responsible Minerals Initiative (RMI), we have access to country of origin information, referred to as the 'RCOI Data,' compiled by RMI for those smelters in our supply chain that have been verified as compliant with the Responsible Minerals Assurance Process (RMAP). This data, in conjunction with the country of origin information supplied by our suppliers, helps us determine whether the smelters and refiners in our supply chain source their materials from the Covered Countries.

4. Suppliers Representation

We have collected written assurances from our suppliers. These assurances fall into three categories:

- (1) Confirmation that they did not provide Covered Minerals from the Covered Countries
- (2) Affirmation that Covered Minerals were sourced exclusively from smelters or refiners validated under the Responsible Minerals Assurance Process (RMAP)
- (3) Affirmation that the Covered Minerals originated from recycled or scrap sources

These representations are contingent on each supplier or contractor conducting a reasonable country of origin inquiry. This inquiry involves them acquiring completed templates and signed representations from their own suppliers. Additionally, the representations mandate our suppliers to confirm the absence of any warning signs and promptly inform Zhen Ding of any significant alterations to the information provided.

In the Reporting Period, we are pleased to report that our RCOI due diligence measures have revealed that 100% of the smelters and refiners utilized by our suppliers for sourcing Covered Minerals have undergone audits, verification, and certification under the Responsible Minerals Assurance Process (RMAP).

Due Diligence

1. Design of Due Diligence

Zhen Ding follows the guiding principles of the "Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas" developed by the Organization for Economic Cooperation and Development (OECD) to establish the due diligence framework. Through the due diligence system, we not only identify and assess supplier risks within our own supply chain, but also respond to and mitigate the identified risks. In accordance with the OECD Due Diligence Guide, we have designed a supplier conflict minerals audit form to guide and assist suppliers in establishing management systems that comply with the OECD Due Diligence Guide through on-site and document audits.

2. Due Diligence Measures Performed

- (1) Establish Strong Company Management Systems

Zhen Ding has implemented a Supplier Code of Conduct and a Conflict Mineral Management Policy. These documents underscore Zhen Ding's dedication to the responsible sourcing of Covered Minerals in our products, while also expressing our expectations that our suppliers share this commitment within their supply chains.

To ensure transparency and adherence, Zhen Ding communicates its conflict minerals policy and associated requirements to suppliers through the company's website. Suppliers are mandated to acknowledge the significance of these guidelines. Zhen Ding further obligates all of our suppliers to procure the Covered Minerals exclusively from smelters or refiners who have obtained independent third-party certification under the Responsible Minerals Assurance Process (RMAP).

(2) Identify and Assess Risk in the Supply Chain

To identify supply chain risks, our Procurement team requested Suppliers to complete the CMRT, EMRT, AMRT detailing the source and custody of Covered Minerals. We reviewed responses, cross-referenced with RMI's RCOI Data, and addressed discrepancies or non-responsive answers.

Upon receiving the completed CMRT, EMRT, AMRT from our suppliers, we carry out due diligence on the identified smelters and refiners. This process involves a thorough examination of the information available in the Dashboard to ascertain if the smelter or refiner has obtained validation under the Responsible Minerals Assurance Process (RMAP) as 'conflict-free.' Subsequently, we assess potential risks within our supply chain and take appropriate actions. The RMAP serves as a valuable resource, providing information about smelters and refiners that, following independent third-party audits, have demonstrated conformity to the RMAP's assessment protocols, ensuring the continued sourcing of conflict-free materials.

(3) Design and Implement a Strategy to Respond to Identified Risks

- (a) Periodic reviews are held and reported to our Sustainability Development Committee.
- (b) We utilize CMRTs, EMRT, AMRT and the most current RMAP conformant smelter lists to monitor and track our suppliers, along with their smelters and refiners information.
- (c) We request our suppliers to provide an updated CMRT, EMRT, AMRT responses if there is any change.
- (d) We have begun supplier audits to assess the accuracy of data and statements made by large suppliers.
- (e) Our membership in the RBA and RMI provides us with the access to the RCOI data, which we use for managing our suppliers' smelters and refiners' information.

(4) Independent Audit of Supply Chain

Zhen Ding does not have any direct relationships with smelters or refiners that process the Covered Minerals, and it does not perform direct audits of our Covered Minerals smelters or refiners. Instead, the Company relies on information provided by its Suppliers, and on information collected and provided by independent third-party audit programs, such as the RMAP as well as other publicly available information.

Furthermore, Zhen Ding has also been regularly audited by RBA to evaluate the adequacy of its conflict minerals compliance program. To date, Zhen Ding has successfully passed the audits and shall continue to collaborate with our suppliers to build a conflict-free supply chain for the Covered Minerals.

(5) Public Disclosure

We report annually on our conflict minerals compliance and supply chain due diligence activities on our website.

Due Diligence Determination

Exhibit I lists the countries of origin of the Covered Minerals in our Products. These origins are reasonably identified by our due diligence measures and based on information from our relevant Suppliers, as well as the country of origin information provided by RMI.

Exhibit II comprises a list of the smelters and refiners that have been reasonably identified through our due diligence processes. This identification is based on information furnished by our material suppliers, who are known to have processed the Covered Minerals in our Products throughout the Reporting Period.

Zhen Ding conducts due diligence on suppliers, discloses findings, and requires suppliers to procure minerals from qualified smelters. Through investigation and analysis, Zhen Ding's supply chain used a total of 225 smelters in 2024. We are delighted to announce that as of the end of the Reporting Period, 100% of the smelters and refiners from which our suppliers procured the Covered Minerals have undergone rigorous audits, verification, and have obtained certification under the Responsible Minerals Assurance Process (RMAP).

Exhibit I: List of Countries of Origin of Covered Minerals

| Countries of Origin of 3TG | | |
|----------------------------------|---------------------------|-----------------------------------|
| BELGIUM | MYANMAR | INDIA |
| JAPAN | GERMANY | ESTONIA |
| UNITED STATES OF AMERICA | TAIWAN, PROVINCE OF CHINA | SOUTH AFRICA |
| CHINA | VIET NAM | AUSTRALIA |
